

You work in a school in the center of the island with two group classes for each level. The school has experience in working with international projects, not in English only, but in other subjects.

The school has a project to increase the number of students that go to school by ecological means. The title is: *We love green mobility*.

To internationalise this initiative, you are going to start a project with three foreign schools from Turkey, Sweden and Italy. The students are aged between 9 and 12 years old.

You are dealing with three levels: 4th, 5th and 6th grade students will take part in it. Their English language competence is very uneven and there are a few special needs students, such as a student in a wheelchair and a down syndrome student.

How would you organise this project so that transnational cooperative groups create a common product? This project must:

- Create interdisciplinary initiatives;
- Mix the different group classes.
